

NOTICE

July 13, 2011

Dear fellow citizens,

After the tragic events of July 11, 2011 and the emergency situation created in our country from a serious problem in the destruction of the Electricity Authority power generating units at the Vasilikos Power Station, due to the explosion in the naval base at Zygi nearby, and the problems encountered with electrification of the whole of Cyprus, had the effect of limiting the hours power will be supplied for the needs of our water wells. Therefore we all need to help to address the limitation of wasted water use.

We therefore must reduce to the minimum, water consumption sparingly, covering only basic needs, and we contribute in our own way in dealing with the emergency created, and saving water and energy.

The following are some of the many simple practices that can help save water and energy and reducing irrational use:

- A) Always use the shower instead of bath.
- B) Wash the dishes in the basin or the economic program of the machine
- C) Check the faucets in your home, do not ever leak.
- D) If you find leaks anywhere, call us immediately at Tel: 26321321

I want to highlight in particular the provisions of the legislation, which prohibits the use of potable water for washing cars, watering gardens, washing sidewalks, etc. We also prohibit the use of potable water for swimming pools and building sites.

The Act provides for offenders, a fine of €51.00.

Dear fellow citizens we should be understanding in the critical moments and help on our way to treat this situation, so proper use and conservation is paramount.

WATER AND ENERGY SOURCES ARE LIFE. USES CORRECTLY, NOT WASTE.

Yours sincerely
Angelos Georgiou
Mayor City Polis
